

**COMPULSORY QUESTIONS**  
**Questions 1 and 2 are the compulsory**

**Question 1: Fill in the blanks:- <mark=15>**

1. The only technical difference between structures and classes in C++ is that \_\_\_\_.
2. Member functions defined inside a class definition are \_\_\_\_ by default.
3. In the UML, inheritance is called \_\_\_\_.
4. \_\_\_\_ enable polymorphic programming as an alternative to switch logic programming.
5. A constructor is executed automatically when an object is \_\_\_\_.
6. To be accessed from a member function of the derived class, data or functions in the base class must be public or \_\_\_\_.
7. To call a function appropriately at execution time is known as \_\_\_\_.
8. If a class contains at least one pure virtual function, it's a(n) \_\_\_\_ class.
9. Constructors cannot be declared \_\_\_\_.
10. \_\_\_\_ is a function that is used to operate on objects of two different classes as arguments, and operate on their private data.

**Question 2: Write an OOP program in c++ :- <mark=9>**

1. Stack operations using multiple exception handlers.

**SELECTIVE QUESTIONS**  
**Choose TWO Questions from the following**

**Question 3: Answer the following :- <mark=13>**

1. Write the code declaration for Levels of inheritance. With the UML illustration.
2. Illustrate the types of inheritance with the accessibilities.

**Question 4: Answer the following :- <mark=13>**

1. Write the code declaration for Multiple inheritance. With the UML illustration.
2. Illustrate the Class Templates.

**Question 5: Answer the following :- <mark=13>**

1. Write the code declaration for template class. With an abstraction of two objects of different data types.
2. Illustrate the Static data members.
